Summary

I am a final-year IT Engineering student at Vaasa University of Applied Sciences (VAMK), currently completing my thesis on the cybersecurity of embedded systems and industrial protocols (Modbus & CAN-bus). While my specialization lies in embedded systems and technical problem-solving, I am highly motivated to broaden my expertise within the wider IT sector or industrial technology. I am seeking an internship where I can apply my strong technical and theoretical foundation to real-world challenges.

Interests

- **Hobby**: Bouldering - "I enjoy indoor bouldering, which challenges my problem-solving skills and requires persistence to find the best routes to reach the goal."

Technical Skills

IT – Systems and Tools

- Operating Systems: Windows 10/11 & Linux (Ubuntu, Debian, and Kali).
- User Management: Fundamentals of Active Directory (AD) & Azure
- Hardware Expertise: Installation, configuration, and troubleshooting of workstations, laptops, and peripherals.
- Virtualization: VMware and Oracle VM VirtualBox
- Programming: Foundations in HTML, C, C++, and Python.
- Version Control: Foundations in Git version control and collaboration via GitHub

Networking and Security

- Networking: Knowledge of LAN, WAN, and WLAN protocols; connectivity troubleshooting.
- Cybersecurity: Strong grasp of security fundamentals, device compliance, and secure workflows in enterprise environments.

Other Skills

- Documentation: Technical documentation and creating clear user/system guides.
- Problem-Solving: Solution-oriented mindset with a proven ability to learn new systems and tools.
- Languages: Finnish (Native), English (Excellent/Professional Working Proficiency).

Education

- **B.Eng. in Information Technology, Vaasa University of Applied Sciences** (2021–Present / Estimated graduation 2026)
- **Matriculation Examination & Vocational Qualification in Automotive Technology**, Helsinki Upper Secondary School of Natural Sciences (2015–2018)

Projects

- **Battery Management System (BMS)**: Designed and implemented a system with a small team for battery management using the Modbus protocol for data transmission. Utilized embedded systems for real-time data processing.
- **Local Temperature Monitoring System (DHT-22)**: Developed a sensor-based system with a small team to monitor and log local temperature data using an STM32 microcontroller

Work Experience

- **Construction Assistant**, Bolt (Summers 2021–2024): Worked in dynamic construction environments, performing material transport and site maintenance. Developed strong teamwork and independent problem-solving skills under pressure.
- **Logistics Worker**, Alepa City bikes (Summer 2020–2021): Responsible for the transport and distribution of city bikes in the Helsinki and Espoo areas. Developed independent work skills in a mobile environment
